

Md. Nahidul Islam

mdnahidulislam1906@gmail.com | [LinkedIn](#) | [GitHub](#) | +37066761012

Software Engineering student at Vilnius University and Junior Software Engineer with professional experience developing and maintaining production web applications and internal business systems. Experienced in React, TypeScript, production debugging, Git workflows and full-stack project architecture. Interested in software, automation, robotics and data-driven engineering roles focused on technical problem solving and continuous improvement.

Work Experience

Junior Software Engineer - UAB Totemas

05/12/2025 – 02/09/2026

- Develop and maintain production web applications and internal CRM systems using React and TypeScript.
- Debug production issues and refactor existing code to improve performance, reliability and maintainability.
- Maintain and customize WordPress platforms, including theme and plugin-level changes, while supporting daily business systems.
- Collaborate with backend developers and stakeholders using Git/Gitea branching, merging and review workflows.

React, TypeScript, WordPress, Git/Gitea, production debugging, frontend architecture

Software Engineer - Intern - UAB Totemas

05/09/2025 – 05/12/2025

- Supported frontend development on production web applications, gaining hands-on experience with React, TypeScript and professional Git workflows.

React, TypeScript, Git/Gitea

Notable Projects

RAQI - Full-Stack E-Commerce Platform - [GitHub](#)

- Architected a production-oriented monorepo for a mobile-first footwear storefront, customer portal, checkout flow, admin interface and REST API.
- Designed application boundaries around authentication, cart and inventory logic, serializable order transactions, testing, health checks and CI.

TypeScript, Next.js, NestJS, PostgreSQL, Prisma, Redis/BullMQ, Docker, Playwright, GitHub Actions

MediEase – Healthcare Management Platform - [GitHub](#)

- Developed a multi-role healthcare web platform with dedicated patient, doctor, staff, and administrator workspaces.
- Implemented authentication, appointment booking, patient onboarding, dashboards, document management, and role-based navigation.
- Integrated Supabase for authentication and application data while applying accessibility and Human-Computer Interaction principles throughout the interface.

Next.js, React, TypeScript, Supabase, Tailwind CSS

JTrack - Data Pipeline & Analytics Dashboard - [GitHub](#)

- Built a Flask dashboard and REST API for tracking student applications and offers, with role-based access and reporting endpoints.
- Created an Excel-to-SQLite ingestion pipeline and optional SharePoint data integration for repeatable operational reporting.

Python, Flask, SQLite, REST APIs, Excel ETL, SharePoint

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, HTML5, CSS3

Robotics & Engineering: Industrial robot programming and operation, Delfoi Robotics, AutoCAD

Frameworks & Platforms: React, Next.js, NestJS, Node.js, Vite, WordPress

Spoken Languages: English (fluent), Bengali (native)

Infrastructure & Tools: PostgreSQL, Prisma, Redis/BullMQ, SQLite, Docker, Git, GitHub Actions, Playwright, Vitest

Education

BSc in Software Engineering (Specialty: Robotics System)- Vilnius University

09/2024 - 01/2028

- Hands-on coursework with industrial robots, including robot programming, simulation using Delfoi Robotics, and technical design using AutoCAD.
- Incentive Scholarship Awardee in 4 semesters.

16 ECTS Micro-Degree in Artificial Intelligence and Society - University of Graz

09/2025 - 06/2026

- Developed a machine-learning pipeline for skin-disease classification and compared Random Forest, ResNet18 and EfficientNet-B0 across 18 disease classes.
